

DOOR BOX INTERCOM MODULE

The Door Box Intercom Module allows you to make all of the phones in a house ring from any other phone, allowing another party in the house to talk privately with you. The distinctive ring will indicate to others in the house that this is an intercom call, not a phone or door box call.

To call someone on the Intercom:

1. Pick up a phone, and press the Flash Key or Hookswitch. You're connected to the Door), and the dial tone should go away.
2. Press 5 or 7, your choice, and hang up.
3. All of the phones in the house connected to the Door Box Controller will start to ring in a distinctive manner.
4. When you hear the phones stop ringing, pick up the phone you just called from and begin talking to the other party.
5. The phones will ring three times in a distinctive manner, and you have a few seconds to answer the line after it stops ringing.
6. If your party isn't on the line, repeat the procedure from Step 1 to try again, if the party didn't answer.
