

DIRECT STOP[®] Animal Deterrent Spray

DirectStop[®] is a highly effective, safe and humane way to deter aggressive animals. When tested with trained attack dogs, this revolutionary citronella formula was found to be just as effective as 10% pepper spray, yet without harmful side effects. Unlike pepper spray, DirectStop[®] does not cause pain, therefore will not increase aggression. In addition, it won't injure the user or on-lookers if spray is accidentally "blown back" into the eyes. DirectStop[®] is also effective on cats, venomous snakes, raccoons, squirrels, opossums, etc. (Not effective on bears.)

"We tested DirectStop's effectiveness in diverting an attack from a trained Doberman. The dog went forward as usual, but immediately backed off the attack when sprayed with DirectStop. The command was repeated, but each approach by the dog was again arrested with DirectStop, and the dog never made contact with the bite target."

Diane Jessup, Canine Aggression Research Center, Olympia, WA

Compare the Difference!

	<u>Direct Stop</u>	<u>10% Pepper Spray</u>
Stops low/medium level aggression	Yes	Yes
Humane and pain-free	Yes	No
Safe for people and pets	Yes	No
Won't increase dog's aggression level	Yes	No
User is safe from potential "blow back"	Yes	No
Eliminates/reduces liability claims	Yes	No
Requires user certification in some states	No	Yes

Instructions for Use:

Shake can once per day prior to potential use. Spray DirectStop[®] towards the animal's nose. (The spray is formulated to minimize eye irritation.) Each can contains approximately 12 one-second sprays with a range of up to 10 ft.

Warning: May not stop all animals! DirectStop[®] is highly effective in stopping low to medium level aggression. However, a very small percentage of dogs are so strongly motivated that no known spray deterrent is effective - physical restraint is the only way to stop an attack from these animals.
